**qaakib02falaqdigital** opened 1m ago

## Description

Currently in our system we can see orders until **Processing** stage. We want to implement order status till **Delivered** and test that. So, need real production order data from the **Operations** team to validate order status tracking in the ERP from Processing through Delivered.

## Requirement

Operations team needs to provide suitable production orders covering the required order lifecycle/statuses so QA can verify that the ERP correctly reflects the order status until Delivered.

## Required Data

- Production order(s) currently in Processing
- Order(s) that progress through subsequent operational statuses
- At least one order that reaches Delivered
- Relevant order IDs for tracking the status changes

## Expected Outcome

QA should be able to use the provided production orders to verify that the ERP accurately displays the complete order status lifecycle from Processing → Delivered.
