1. Description

Introduce an HRM module within the Falaq Food ERP/CRM system to manage employee information, attendance, and leave-related activities from a centralized platform.

2. Business Requirement

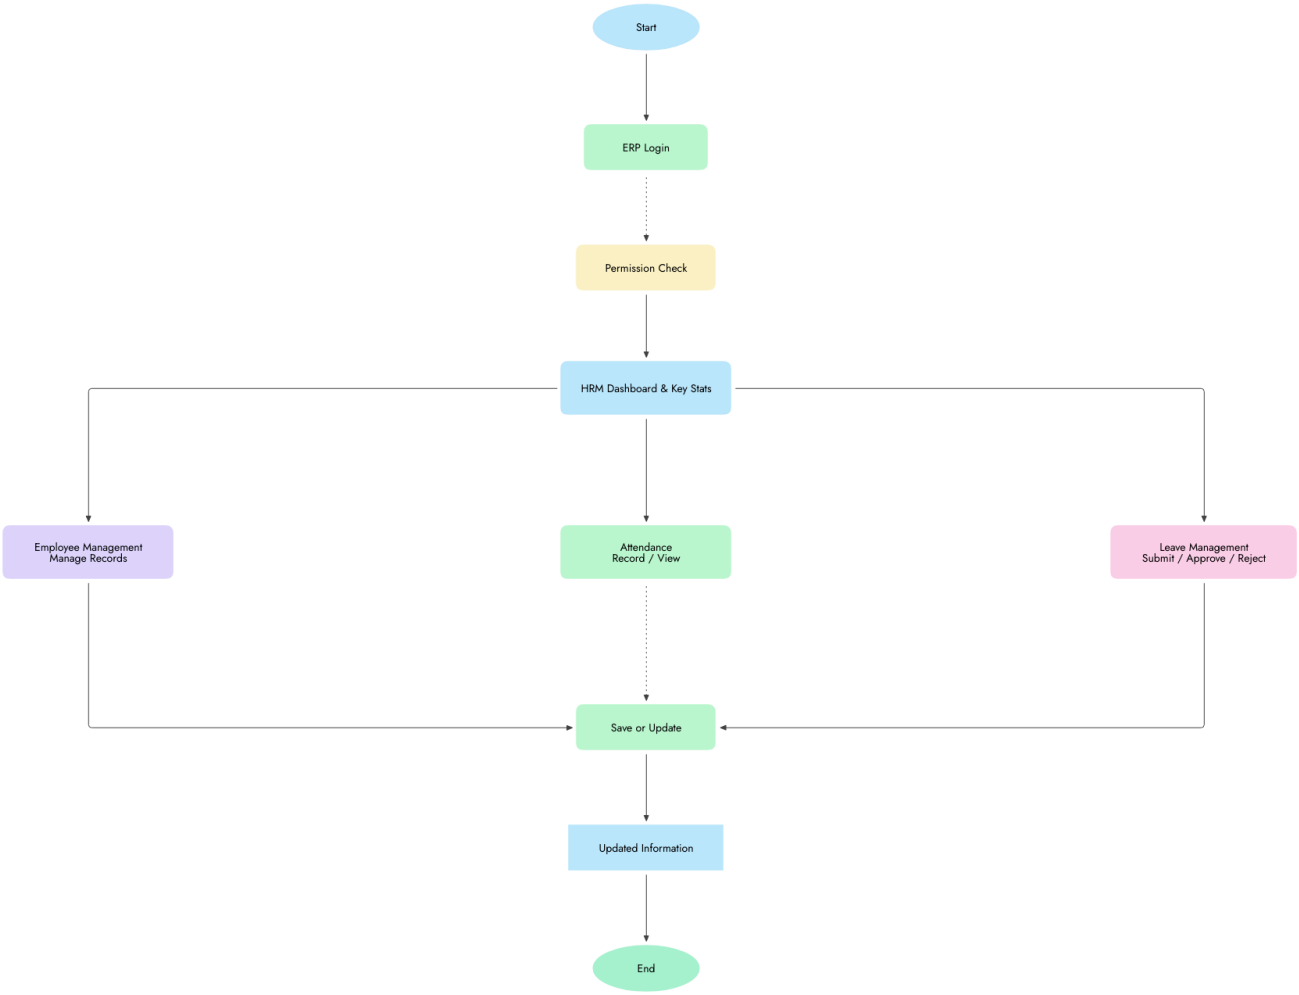

The HRM module should allow authorized HR/Admin users to maintain employee records and manage employee attendance and leave information within the ERP.

3. User Story

As an authorized HR/Admin user,
I want to manage employee information, attendance, and leave through the ERP,
so that employee-related activities can be managed efficiently from a centralized system.

4. User Flow

ERP Login → HRM → Employee Management / Attendance / Leave → Perform Action → Save/Update → Display Updated Information

5. Business Outcomes

- Reduces manual HR record keeping.
- Simplifies attendance and leave management.
- Improves visibility of employee availability and attendance.
- Provides HR/Admin with accurate employee-related information.
