Operation Dashboard

Updated Business Logic & Metric Definitions

Prepared by: Akib Rahman

Dashboard Overview

The Operation Dashboard provides operational metrics for tracking orders, agent activities, confirmations, cancellations, dispositions, payments, and extra-bucket performance.

1. Lifetime Metrics

These metrics are calculated using lifetime data and are not affected by date filters.

1.1 Pending Order (Lifetime)

Definition

The total number of orders that have been placed but have not yet been processed or confirmed by the Operations/Tele-sales team.

Calculation Rule

- Count orders where `Status = Pending`.
- Lifetime data is considered.
- All channels are included.
- Exported and scheduled orders are excluded.

Example

- Customer placed **25 orders** today.
- Tele-sales team confirmed **18 orders**.
- **Pending Orders = 7**

Disposition Breakdown

The modal will show disposition details such as:

- Will Check
- Busy
- No Response
- Pause
- Phone Off
- No Disposition

Note: A `No Disposition` metric will be added.

1.2 Scheduled Orders (Lifetime)

Definition

Orders that are planned to be processed, packed, dispatched, or delivered at a future date/time instead of immediately.

Calculation Rule

- Count orders where `Order Type = Scheduled` .
- No date range is applicable.
- No channel filter is applicable.
- Calculation is based on order type.

Updated Requirement: Scheduled orders are orders where either the **Order Type is Scheduled** or the **Order Status is Scheduled**.

Example

1. Customer places an order on **26 July**.
2. Customer requests delivery after 3 days.
3. Agent schedules the order for **30 July**.
4. **Scheduled Orders = 1**

1.3 Advance Payment (Lifetime)

Definition

Advance Payment is the amount of money collected from a customer before the order is fulfilled or delivered.

Calculation Rule

- Count orders that contain an advance payment.
- No date range is applicable.
- No channel filter is applicable.
- Advance Payment should have `Status = Pending` .

Example

1. Customer places an order worth **BDT 100**.
2. Customer pays **BDT 20** in advance.
3. Agent records the advance payment.
4. **Advance Payment = BDT 20**

5. Telesales Head or Operations team needs to approve the payment.

2. Date Range Metrics

Only the **Date Filter** is applicable to these metrics.

2.1 Total Order

Definition

The total number of orders **created** during the selected date range, regardless of their current status.

Calculation Rule

- Filter orders by **Order Creation Date**.
- Count every order created within the selected date range.
- Include orders from all sources:
 - Website
 - Admin
 - App
 - Other available sources

Example

Selected Date: July 20, 2027

- Orders created on July 19 = 20
- Orders created on July 20 = 25

Result:

Total Orders = 25

2.2 Pending Order

Definition

The number of orders created during the selected date range that currently have `Status = Pending` .

Calculation Rule

- Filter orders by **Order Creation Date**.
- Count only orders currently in `Pending` status.
- The date when the status was last updated does not matter.
- `No Disposition` should be included in the modal.

Example

Selected Date: July 20, 2027

- Orders created = 25
- Confirmed = 12
- Cancelled = 3
- Remaining Pending = 10

Result:

Pending Orders = 10

2.3 Confirm Order

Definition

The number of orders created during the selected date range that were confirmed.

Calculation Rule

- Filter orders by **Order Creation Date**.
- Count orders whose current status is `Confirmed` or has passed the Confirmed status, such as:
 - Processing
 - Beyond Processing
- The order must never have passed through `Cancelled` .
- The confirmation date does not matter.

Example

Selected Date: July 20, 2027

- Orders created on July 19 = 20
- Orders created on July 20 = 25
- Tele-sales confirmed on July 20 = 12

Result:

Confirmed Orders = 12

2.4 Cancel Order

Definition

The number of orders created during the selected date range that reached `Cancelled` status.

Calculation Rule

- Filter orders by **Order Creation Date**.
- Count orders that reached `Cancelled` status.
- Refunded orders may also be included.
- Cancellation date does not matter.
- Cancellation is counted based on the **order creation date**.

Example

Selected Date: July 20, 2027

- Orders created on July 19 = 20
- Orders created on July 20 = 25
- Orders cancelled = 3

Result:

Cancelled Orders = 3

2.5 Confirmed Extra Bucket

Definition

The number of confirmed orders where an agent successfully added extra products or increased the original order value.

Calculation Rule

- Filter orders by **Order Creation Date**.
- Consider only confirmed orders.
- Count confirmed orders containing an **Extra Bucket**.
- Calculate the total extra amount added.

Example

Selected Date: July 20, 2027

- Orders created = 25
- Confirmed = 12
- Confirmed orders with additional products = 4

Result:

Extra Bucket Count = 4

Extra Bucket Amount = Total value of added products

Correction: The order must have passed the confirmation state and must not have been cancelled.

3. All-Filterable Metrics

All available filters are applicable to these metrics.

3.1 Working Orders

Definition

The total number of orders where an agent has performed work through:

- Disposition
- Scheduling
- Cancellation
- Confirmation
- Order creation by an agent

Working Orders are divided into **Fresh Orders** and **Old Orders**.

Fresh Orders

Orders where the disposition was updated or the order was worked on for the **first time** during the selected date range.

Old Orders

Orders where the disposition was updated or the order was worked on **before** the selected date range.

Example

- 30 customer orders were received.
- 8 orders are currently being processed/updated by agents.
- 7 orders have already been completed.
- 5 orders were cancelled by the agent.

Working Orders = 20

Important: Editing an order without adding a disposition should **not** count as a Working Order.

3.2 Confirmed Orders

Definition

Confirmed Orders are a subset of Working Orders.

This metric represents how many Working Orders were successfully confirmed.

Example

- Customer orders = 25

- Confirmed = 20
- Cancelled = 3

Confirmed Orders = 20

3.3 Extra Bucket

Definition

Extra Bucket is a subset of Working Orders and represents the number of Working Orders where additional products were added.

Example

Suppose:

- Total confirmed orders = 9
- Existing Extra Bucket count = 3
- Existing Extra Bucket amount = BDT 4,080
- Extra Bucket percentage = 33%

A customer originally orders products worth **BDT 200**.

The agent convinces the customer to add products worth **BDT 4,000**.

After confirmation:

Extra Bucket Count = 10
Total Amount = BDT 8,080
Percentage = 40%

3.4 Cancelled Orders

Definition

Cancelled Orders are a subset of Working Orders.

This metric represents how many Working Orders were cancelled.

Example

- Customer orders = 25
- Confirmed = 20
- Cancelled = 3

Cancelled Orders = 3

3.5 Fake Orders

Definition

Fake Orders are a subset of Working Orders identified as:

Order Type = Fake

Example

- Working Orders = 20
- Fake Orders identified = 4
- Remaining Working Orders = 16

Result:

Fake Orders = 4

Current implementation logic: Fake Orders are currently implemented as a metric based on Working Orders. The percentage logic may require further business confirmation.

3.6 Disposition

Definition

Disposition is a subset of Working Orders where the order is still:

Status = Pending

and has a disposition.

Example

Working Orders = 20

Current outcomes:

- Confirmed = 10
- Cancelled = 5
- Disposition = 5

Result:

Disposition = 5

Disposition Breakdown

The 5 disposition orders can be broken down as:

Disposition | Count -- | -- Customer Busy | 2 Phone Off | 1 On Hold | 1 Call Back Later | 1 Total | 5

4. Table

Note: Metrics from **Assign** through **Not Started** display lifetime data for pending orders. Date range filters **do not** apply to these columns.

Metric Definitions

Column Name	Description / Logic	Date Filter Applicable?
Agent Name	Name and email address of the agent.	N/A
Work	Total number of orders processed by the agent within the selected date range.	Yes
Confirmed	Total number of orders confirmed by the agent within the selected date range.	Yes
Cancelled	Total number of orders cancelled by the agent within the selected date range.	Yes
Extra Bucket	Additional work-bucket metrics tracked per agent.	Yes
Discount	Total monetary value of discounts applied to confirmed orders.	Yes
Shipping	Total monetary value of free shipping provided on confirmed orders (e.g., Inside Dhaka @ 60 Tk	Yes

Column Name	Description / Logic	Date Filter Applicable?
	each).	
Assign	Total number of active, lifetime pending orders currently assigned to the agent.	No (Lifetime)
Dispositions (PhoneOff, NoResponse, Busy, Pause, Follow, Hold, Later, Other)	Count of lifetime pending orders categorized by their specific status disposition.	No (Lifetime)
Not Started	Total number of assigned pending orders that have no disposition logged yet (formerly labeled <i>Unassigned</i>).	No (Lifetime)

Data Table Representation

Below is the dynamic row-level schema populated with sample data based on agent activity:

Agent Name	Email	Work	Confirmed	Cancelled	Extra Bucket	Discount (Tk)	Shippi (Tk)
Foysal	foysal@example.com	5	5	0	0	60	120

5. Important Business Rules

- **Pending Order (Lifetime)** is based on `Status = Pending` .
- Scheduled orders are excluded from Lifetime Pending Orders.
- **Scheduled Orders** are identified by Scheduled Order Type or Scheduled Order Status.
- **Advance Payment** should be in Pending status.
- Date-range metrics use the **Order Creation Date**, not the status update date.
- Confirmed orders must not have passed through Cancelled status.
- Cancelled orders are counted based on their **creation date**, regardless of when cancellation occurred.
- Editing an order without a disposition does not make it a Working Order.

- Extra Bucket requires an increase in the order value.
- Fake Orders are currently treated as a Working Order metric.
- Disposition represents Pending Orders with a disposition.
- Assign and disposition columns in the agent table use **lifetime data**.
- Date filters do not affect lifetime Assign/disposition values.
