

	channel. Just based on Type. [Life Time]		
3. Advance Payment	Advance Payment is the amount of money collected from a customer before the order is fulfilled or delivered. Life time Advance payment Note : Advance Payment should be Status Pending. Count number of orders where the order has an advance payment, no date range, and no channel. [Life Time]	- Customer A places an order worth BDT100 and pays BDT20 in advance. - Agent will record BDT20 as advance payment. Advance Payment = 20 Tk - Telesense head or Operation team need to approved.	
Filterable Metrics:			
1. Total Order	The total number of orders created during the selected date range, regardless of their current status. - Filter orders by Order Creation Date. - Count every order created within the selected date range. - Includes orders from all sources (Website, Admin, App, etc.).	- Filter a Date : Jul 20, 2027 - Custer place order in 19 July 20 order and 20 July 25 order. - in filter Jul 20, 2027 output will: 25 order.	
2. Pending Order	The number of orders created during the selected date range that have a status is pending. Calculation Rule	Filter Date: July 20, 2027 - Orders created = 25 - Confirmed = 12 - Cancelled = 3	Same as previous pending order is it with disposition or not disposition.

	- Filter orders by Order Creation Date. - From those orders, count only the ones that are currently in Pending status. - It does not matter when the status was last updated.	Remaining Pending = 10 Result Pending Orders = 10	note : No position Matirics will be add 
3. Confirm Order	The number of orders created during the selected date range that were and confirmed Calculation Rule - Filter orders by Order Creation Date. - Count the orders whose current status is Confirmed. - The confirmation may happen on any date. No need to check when confimed.	- Filter a Date : Jul 20, 2027 - Custer place order in 19 July= 20 order and 20 July= 25 order. - Tele sales in 20 July Confirm order 12 order - in filter Jul 20, 2027 output will: 12 Orders	
4. Cancel Order	The number of orders created during the selected date range that were cancelled. Calculation Rule - Filter orders by Order Creation Date. - Count the orders whose final status is Cancelled. - The cancellation may happen on any date. No need to check when.	- Filter a Date : Jul 20, 2027 - Custer place order in 19 July= 20 order and 20 July= 25 order. - Tele sales in 20 July Cancel order 3 order - in filter Jul 20, 2027 output will: 3 Orders	Fake and Double Order created. is count of cancel order is include fake and double order ? also Pending amount means? is Total value of Cancel amount ? 
5. Confimed Extra	The number of confirmed orders where the agent	Filter Date: July 20, 2027	

Bucket	successfully added extra products or increased the original order value. - Confirmed Order - The total amount must be increased. Calculation Rule - Filter orders by Order Creation Date. - Consider only Confirmed orders. - Count the confirmed orders that contain an Extra Bucket. - Calculate the total extra amount added.	- Orders created = 25 - Confirmed = 12 4 confirmed orders include additional products. Result Extra Bucket Count = 4 Extra Bucket Amount = Total value of added products	
1. Working Orders	The total number of orders where we have disposition on the selected date range. For example, selected date range is Jul 29, 2026 now, we need to count all orders where disposition created Jul 29, 2026 .	30 customer orders were received today. 8 orders are currently being processed or updated by agents. 7 orders have already been completed. 5 orders were cancelled by agent side. Working Orders = 20	Fresh and Old order. how can i distribute with fresh and old order ? 
2. Confirmed Orders	The is the subset of Wokring orders. How many orders are	25 customer orders were placed today.	

	confirmed from our working orders.	- After verification, 20 orders were confirmed. 3 orders were cancelled. Confirmed Orders = 20	
3. Extra Bucket	Same extra bucket logic. But this is the subset of working orders. How many orders has extra bucket from our working orders?	- Suppose total confirmed order = 9, extra bucket count = 3, TK = 4080, % = 33%. - A customer ordered BDT200 valued item. - Agent called and convinced the customer to add two more product of total 4000TK and confirmed order. Extra bucket count = 10, Total amount = 8080TK, % = 40%	
4. Cancelled Orders	this is the subset of working orders. How many orders are cancelled from our working orders?	25 customer orders were placed today. - After verification, 20 orders were confirmed. 3 orders were cancelled. Cancelled Orders = 3	 Fake and double one kind of cancel order, so is cancel could include fake and double ?

5. Fake Orders	this is the subset of working orders. How many of our working orders were fake? Fake Orders represent the number of Working Orders that were identified as Order Type = fake	Working Orders = 20 During verification: • 4 orders were identified as Fake. • The remaining 16 orders continue with other outcomes. Result Fake Orders = 4	
6. Disposition	this is the subset of working orders. How many orders are pending? Disposition represents the number of Working Orders that are still Status = Pending Pending + Disposition	Working Orders = 20 Current outcomes: • Confirmed = 10 • Cancelled = 5 • Disposition = 5 Disposition breakdown: • Customer Busy = 2 • Phone Off = 1 • On Hold = 1 • Call Back Later = 1 Result Disposition = 5
